

```
std::vector< cv::Point2f >
```

```
graph BT; A[aruco::Marker] --> B[std::vector< cv::Point2f >];
```

A diagram illustrating a relationship between two C++ types. At the bottom, a gray rectangular box contains the text `aruco::Marker`. A blue arrow points vertically upwards from the top center of this box to the bottom center of a white rectangular box above it. The white box contains the text `std::vector< cv::Point2f >`. This visualizes `aruco::Marker` as a specialization or a type that inherits from `std::vector< cv::Point2f >`.

```
aruco::Marker
```
